

e-Stet
YOUR DISCOVERY

e-Stet ON DEMAND

Now at your fingertips

e-Stet introduces **ON DEMAND**, the newest addition to our family of services. Our mission has always been to save our clients time and money by developing efficient, streamlined products and services. **ON DEMAND** is the next step in the evolution of our mission.

WHAT IS IT?

e-Stet, together with Venio Systems, has developed a full service, autonomous processing ECA server installed at your location that is fully managed and operated by e-Stet. Just plug in your media, call or email us, and our team will quickly process your data and make it available to you in either a slick and smart Early Case Assessment platform or in your preferred output format.

HOW FAST IS IT?

Yes, we've all heard it before; "it all depends on data type". Our tests have yielded results ranging from 6GB to 10GB per hour. The best part is that you save time by not having to copy your data onto another media or waiting for a vendor to pick it up and return it. You can move your data with the press of a button at Gigabit speeds within your own network.

VALUE PROPOSITION

- Vital time and cost savings.
- No price /contract negotiation for every project. Pricing is determined at the outset.
- Reduce work burden on in-house staff.
- Partner with a team of experienced computer scientists.
- The only technical requirement is a T1 connection.

We do the work for you

THE APPLIANCE

- Processing is performed virtually by e-Stet at your facility. e-Stet remains responsible for all work product and processes.
- Autonomous appliance. It stores, processes, hosts online, and backs itself up.
- Virtual Machines are accessible by your entire office. Attorneys around the globe can see what you see, or watch the processing as it unrolls.
- View the content of your forensic images.
- Receive a notification email when your data is ready.
- Move files within your network at Gigabit speeds, while the appliance remains completely separate from your network.
- Secure. 128 bit encryption.

PROCESSING/ECA SOFTWARE – VENIO FPR:

- State of the art processing and Early Case Assessment platform.
- Multiple date and file type restriction capabilities.
- Email Map analysis.
- Analytics/ Advanced searching (fuzzy, proximity, synonyms, wildcard).
- De-nisting.
- De-duping (both global & custodial).
- Index all text or email body text.
- Native file viewer.
- Many reporting options.
